Aislinn E. Smith
512-962-5090 | aislinnsmith@utexas.edu

EDUCATION

University of Texas at Austin – College of Natural Sciences | Class of 2022
Overall GPA: 3.87/4.00
Bachelor's – Mathematics (Honors Track)
Certificate Program - Scientific Computation and Data Science

RESEARCH/ PROJECTS

Max Planck Institute for Math in the Natural Sciences - Guest Researcher **Summer 2023 - Present**

- Currently leading a remote inquiry-based reading course focused on Riemann surfaces and complex algebraic curves with a survey of other topics in Lie group theory, symplectic geometry, and mapping class groups.

Mathematics Honors Thesis: "*Minimal surfaces in hyperbolic manifolds and link complements*" **Fall 2022**

- Advised by Prof. John Luecke
- The project is motivated by REU research, specifically on the topic of geodesics formed by horocyclic edges within minimal surfaces of hyperbolic manifolds with parabolic cusps.

SUMRY REU – Yale University **Summer 2022**

- Undergraduate NSF funded research in low dimensional topology and combinatorial hyperbolic geometry mentored by Dr. Franco Vargas-Pallete
- Project was motivated by the converging interests of closed geodesics of hyperbolic surfaces within surfaces of constant mean curvature.
- One of my contributions was the development of a finite element method that could simulate mean curvature flow such that it was compatible with a hyperbolic metric.

Moncrief Internship w/ The UT ODEN Institute for Computational Sciences **Summer 2021 - Spring 2022**

- Developed mathematical models/algorithms using principles of stochastic path integral control to aid automated vehicles in avoiding obstacles with a degree of randomized motion and varying levels of allowed risk under advisement of Dr. Takashi Tanaka
- Compared the computational complexity and success of two different models of diffusion-based optimal control. One of which used reinforcement learning and a weighted average of randomly sampled trajectories, while the second method numerically found solutions to the Hamilton-Jacobi-Bellman differential equation.

NSF RTG Undergraduate fellowship w/ UT Analysis of PDEs group **Fall 2020 – Spring 2022**

- Undergraduate NSF funded research in low dimensional topology and combinatorial hyperbolic geometry mentored by Dr. Franco Vargas-Pallete
- Independent research project guided by Dr. Stefania Patrizi on the topic non-local diffusion operators/the Fractional Laplacian
- Studied derivation and applications of harmonic extension of Laplacian to model energy minimization of crystal dislocations
- Took a series of three independent study courses on various topics in harmonic analysis and complex analysis following the completion of the year-long fellowship.

Complex Systems REU– University of Minnesota **Summer 2020**

- Undergraduate NSF-funded research in nonlinear fluid dynamics led by Dr. Arnd Scheel
- Researched the stability and resonances of non-linear Fischer KPP reaction-diffusion equations.

- The goal of this project was to use heteroclinic bifurcation analysis to explain and characterize a strange resonance pattern that occurred at the threshold of absolute and convective instability in the control parameter of the non-linear ODE.

TALKS/CONFERENCES

CIRM Research School - Renormalization and Visualization for Packing, Billiards, and Surfaces Summer 2023
- Research school participant

Joint Mathematics Meeting (JMM) Winter 2023
- Presentation: *Low dimensional topology and combinatorial hyperbolic geometry*
- Presented on 2nd part of Yale REU research/undergraduate poster session

The Young Mathematicians Conference @ Ohio State University Summer 2022
- Presentation: *Finding the Minimal Splitting Surface of the Ideal Regular Octahedron in the Poincare Ball*

GROW (Graduate Research Opportunities for Women) **@ Duke University** Fall 2022

Texas Undergraduate Mathematicians Conference Fall 2022
- Presented on Yale REU research and hyperbolic geometry for early undergraduates, and spoke on panel advising on undergraduate research
- Presentation: *Finding the Minimal Splitting Surface of the Ideal Regular Octahedron in the Poincare Ball*

UT Math Directed Reading Project Presentation Spring 2021
- Presented on the computation of homology groups of piecewise linear manifolds

UT Austin College of Natural Sciences Research Forum Spring 2021
- Poster presentation on work done during Fellowship with Analysis and PDEs RTG

TEACHING/ WORK EXPERIENCE/SKILLS

Teaching Assistant – UT Austin Department of Mathematics Spring 2023

UT Austin Sanger Learning Center – College Math and Physics tutor Summer 2019 – Fall 2021

Math and Physics Instructor/Tutor @ The Liberal Arts and Science Academy Fall 2020 – Spring 2021
- Tutored AP Physics afterschool
- Instructed inquiry-based pre-calculus course for accelerated high school students

UT Austin Undergraduate Learning Assistant Fall 2020 & Winter 2021
- Undergraduate TA for Engineering Physics (Electricity and Magnetism)

Coding Knowledge – Fortran, C++, Python (Scipy, Pyvista), MATLAB

ACADEMIC AWARDS

2023 NSF Graduate Fellowship – Topology Fall 2023 - Spring 2028
UT Austin Dean's Strategic Fellowship Fall 2023 - Spring 2028
Nancy Francis and William Arnold McMinn Presidential Scholarship Fall 2021 - Spring 2022
NSF Undergraduate Research Training Grant Fall 2020 - Spring 2021
